

Chrome OS vs Windows (vsdiff.com)

Feature	Chrome OS	Windows
Usability	Designed for simplicity; intuitive interface tailored for web browsing and cloud applications.	Feature-rich; more complex interface with extensive settings and customization options.
Performance	Fast boot times and efficient performance on lower-end hardware.	Robust performance but can be resource-intensive, especially on older machines.
Application Support	Primarily supports web apps and Android apps via the Google Play Store.	Supports a vast range of desktop applications and software tools.
Security	Highly secure due to its cloud-centric architecture and regular updates.	More vulnerable to malware; requires robust antivirus solutions.
Customization	Limited customization options focused on simplicity.	Highly customizable, allowing users to tweak and modify the OS extensively.
Cost	Generally more affordable devices; OS is free to use.	Varies; licensed versions can be expensive, particularly for enterprise use.
