

DSLR vs Mirrorless (vsdiff.com)

Feature	DSLR	Mirrorless
Size and Weight	Generally larger and heavier due to the mirror mechanism.	More compact and lightweight, making them easier to carry.
Viewfinder	Optical viewfinder providing a real-time view of the scene.	Electronic viewfinder (EVF) or LCD screen displaying a digital preview.
Autofocus Speed	Faster autofocus in good lighting conditions; may struggle in low light.	Advanced autofocus with on-sensor technology; excels in low light.
Battery Life	Typically longer battery life due to the lack of live view.	Shorter battery life because of the electronic components always being active.
Lenses Availability	Wider selection of lenses available due to longer market presence.	Growing selection, but fewer options compared to DSLRs.
Price Range	Often more affordable for similar features at entry-level.	Can be pricier at entry-level, but prices are decreasing.
