

4K Streaming vs 1080p Streaming (vsdiff.com)

| Feature | 4K Streaming | 1080p Streaming |
|-----------------------|---|---|
| Resolution | 3840 x 2160 pixels | 1920 x 1080 pixels |
| Video Quality | Exceptional clarity with four times the detail of 1080p | High quality; clear for most viewers |
| Bandwidth Requirement | 25 Mbps or higher | 5-10 Mbps |
| Device Compatibility | Requires 4K-capable devices | Compatible with most devices |
| Streaming Services | Available on select platforms (e.g., Netflix, Amazon Prime) | Commonly available on almost all platforms |
| File Size | Significantly larger; about 4 times the size of 1080p files | Smaller file size, easier to stream and download |
| Viewing Distance | Ideal for large screens and closer viewing distances | Suitable for smaller screens and standard viewing distances |
