

Desktop vs Laptop for Gaming (vsdiff.com)

Feature	Desktop	Laptop
Performance	Generally offers better performance due to higher power supply and space for advanced hardware	More compact and may have limited performance compared to desktops
Upgradeability	Highly upgradeable (GPU, CPU, RAM, etc.)	Limited upgrade options; often requires replacing the whole unit
Portability	Less portable; typically requires a dedicated space	Highly portable; easy to take on the go
Cost	Can be more cost-effective for high-end specifications	More expensive for similar performance specifications
Cooling	Better cooling capabilities due to larger size and more efficient cooling systems	Limited cooling, may experience overheating during intense gaming sessions
Screen Size	Can support larger monitors for an immersive experience	Fixed screen size; usually smaller than standard monitors
